

Computer/Network Specialist

Describe how your education, professional experience, and training has prepared you to be successful as a Network Specialist in a school district. Specifically, include your relevant experience working in the setup, maintenance, and modification of networks.

Give us an example from your experience that best demonstrates your ability to administer Windows, AD, Group policies, SQL, Virtual servers or Azure/AWS/Google Cloud Platforms

Suppose that a network file server has just crashed. The one person who knows the system well is on vacation and unreachable. There is little documentation for the system. What specific steps would you take to get the system operational again?

Describe the steps you have taken to configure network systems for high availability. Include the strategies you have used for backup recovery, failover, load balancing, and full redundancy.

Describe an instance when you had trouble diagnosing and resolving a data network failure, outage, or performance issue. What was the problem and how did you resolve it?

Tell us about your experience simulating system failures and conducting data recovery drills of production backups to validate full operating system and data recovery.
